

OLUWADAMILOLA JOHN

Full Stack Engineer | JavaScript · Node.js · MongoDB · REST APIs
Port Harcourt, Nigeria · Available for Remote Engagement

PROFILE SUMMARY

Computer Science undergraduate with hands-on experience building RESTful APIs, server-rendered web applications, and responsive front-end interfaces using modern JavaScript technologies. Proven ability to design and deploy full-stack solutions independently — from database schema to UI. Eager to contribute across the stack in a remote, project-based environment while continuing to deepen React expertise.

TECHNICAL SKILLS

Languages & Runtime: JavaScript (ES6+), HTML5, CSS3

Backend: Node.js, Express.js, RESTful API Design, Session & Auth (cookies, password hashing)

Databases: MongoDB (NoSQL), MySQL (Relational)

Frontend: EJS Templating, Responsive Design, UI/UX Fundamentals; currently building React skills

Tooling: Git, GitHub, Unix CLI, GitHub Pull Requests & Code Review

PROJECTS

Bible Verse API & Web App — *Node.js · Express · MongoDB*

- Designed, built, and deployed a RESTful API serving structured biblical data from a MongoDB database.
- Resolved production database issues, demonstrating ability to debug and maintain live systems.
- Demonstrates end-to-end backend ownership: schema design, API layer, deployment, and incident response.

Authentication-Based Web App — *Node.js · Express · Sessions · MongoDB*

- Implemented secure user authentication including session management, cookies, and password hashing.
- Applied security best practices for credential storage and session lifecycle.

Peer Review Blog System — *Node.js · GitHub · Collaborative Dev*

- Built a collaborative blog platform using GitHub Pull Requests to simulate real-world team code review.
- Demonstrates comfort with distributed, async team workflows — directly relevant to remote collaboration.

Truck Rental System — *Node.js · Express · MongoDB · EJS · REST API*

- Built a full-stack truck rental web app with a focus on backend security and scalability, following current industry standards.
- Implemented advanced backend security: secure session management, cookie handling with consent modal, and a complete forgot-password flow (token generation, email dispatch, expiry, and reset).

- Designed a RESTful API backend with clean route separation and scalable architecture patterns.
- Delivered a consistent, polished UI with themed layouts, alert banners, and a user-friendly booking request flow — demonstrating full ownership across the stack.

Dynamic Blog with EJS — *Node.js · Express · EJS Templating*

- Developed a server-rendered blog with dynamic routing, reusable templates, and content management.

Responsive Websites & Portfolio UI — *HTML5 · CSS3 · JavaScript*

- Delivered multiple mobile-first, fully responsive websites with accessible hamburger navigation and clean UI.

EDUCATION

Bachelor of Science — Computer Science

University of Port Harcourt, Nigeria | In Progress
